EDUCATION

Bachelor of Science in Computer Science (Software Engineering)

Arizona State University

Aug. 2024 – May 2026

Tempe, AZ

Associate of Arts in Computer Information Systems

Grand Rapids Community College

Aug. 2023 – Aug. 2024

Grand Rapids, MI

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Frontend Development, Backend Development, Databases & Storage, Computer & Network Security, Cloud Computing

EXPERIENCE

NASA Psyche Mission

Technical Lead

Sep. 2025 – May 2026

Tempe, AZ

- Led development of immersive 3D educational software for the NASA Psyche mission, now on permanent display at ASU's ISTB4 building, which hosts over 30,000 visitors annually.
- Collaborated with NASA scientists and university researchers to validate scientific accuracy and integrate domain expertise into interactive visualizations.
- Defined project scope, milestones, and team responsibilities, ensuring consistent alignment with sponsor requirements throughout the development lifecycle.

Packsyncr

Full Stack Developer

Nov. 2025 – Present

Tempe, AZ

- Architected and built a full-stack platform for collaborative Minecraft resource packs, encompassing a website, REST APIs, cloud storage, and a desktop sync client.
- Engineered a secure authentication system using Microsoft OAuth, JWTs, and refresh tokens, with fine-grained role-based permissions for pack access and collaborator management.
- Designed the end-to-end system, including service architecture, database schema, API endpoints, and automatic cross-user file synchronization.

Next Level DFS

Web Developer

Dec. 2025 – Jan. 2026

Rockford, MI

- Improved website performance and responsiveness by refactoring the front-end architecture and optimizing components, resulting in faster load times and smoother user interactions across devices.
- Enhanced long-term maintainability by reorganizing the website into modular, reusable components.

PROJECTS

Convolutional Neural Network | Java, Git

- Implemented a CNN from scratch in Java, manually building convolutional, pooling, and fully connected layers without any ML frameworks.
- Achieved ~99% classification accuracy on the MNIST and Google Quick Draw datasets, validating end-to-end training, inference, and generalization.

Dungeon Generator | React, Javascript, Vite, Git

- Built a React/Vite tool for procedurally generating multi-floor dungeons with a tile-based canvas editor, supporting rooms, corridors, and interconnected staircases.
- Developed a reusable room library system for creating, editing, and applying custom room templates across generated layouts.

Deterministic Finite Automaton Parser | C++, Git

- Built a DFA parser with a custom lexer to tokenize formal language definitions and validate input sequences against specified automata.

TECHNICAL SKILLS

Programming Languages: Java, Kotlin, C#, C, C++, Swift, JavaScript, TypeScript, SQL, HTML, CSS, XML

Frameworks & Libraries: React, Node.js, Three.js, Vite, Tailwind CSS, REST APIs, OAuth 2.0

Development Tools: Git, GitHub, Azure, Cloudflare, Docker, Unity, Blender, VSCode, IntelliJ, XCode
